

ROCKCOCO 12.0

The Story

Fatboy's new RockCoco 12.0 replaces its RockCoco predecessor. This light is recognised as the world's first indoor and outdoor chandelier to use LED technology. To give the existing design an even more universal character, Fatboy has powered up the RockCoco design. The first version with 10 LEDs has been refined to create a new product with 12 lights: RockCoco 12.0. The new design creates more space, freedom and in terms of design is more balanced. The transparent armature of RockCoco 12.0 is reminiscent of the elegant 18th-century Baroque style. This, combined with the iconic shape of the traditional lampshades, truly makes it a designer light.

In the 12.0 version, the electrical housing is integrated into the armature. This stylish change hides the ceiling kit and transformer from view. Also, the new lampshades now have a wafer-thin chrome layer. The result is a functional light that shines downwards. Two extra LEDs give 20% more light output. The light colour has also been modified. Warm white light makes RockCoco 12.0 more homely. This chandelier will hang with verve in any hall, living room, caravan or castle.

Universal application

DeMakersVan, the Dutch designers of RockCoco, mixed Louis XIV glamour with a twist of rock 'n' roll. This gives the chandelier a decorative and delicate look. Even so, RockCoco 12.0 is highly durable. Want to know the greatest strength of this light? It can be used anywhere inside and outside the home. A dark balcony turns into a 1730 film set. A garden party is built around the chandelier. Planning a romantic, moonlit dinner? Put this light in the tree and you won't need the moon. No worries when it comes to the weather! RockCoco 12.0 is UV-resistant and waterproof. Recognized as the world's first weatherproof chandelier, RockCoco 12.0 hangs just as easily outdoors as it does indoors.

Nice to know!

- The warm LED light (2200 kelvin) makes this icon look amazing in any interior.
- Hang this chandelier wherever you like. The light is UV-resistant and waterproof.
- Enjoy it from the comfort of your chair. Use the grey remote control to operate the light.
- The lampshades have a wafer-thin chrome layer. The result is a functional light that shines downwards.
- 20% increased light output with two extra LEDs.
- RockCoco 12.0 has an elegant ceiling cover instead of a ceiling kit. The wiring is stylishly integrated into the armature.
- Material: polycarbonate
- Weight: 7.25 kg
- H= 78 CM W= 78 CM D= 67 CM.
